REMARKS		
1	:	P: Pass, F: Fail, DATA: No Evaluation, N/A: Not Applicable
2	:	*The reported expanded uncertainty is based on the standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95%. Unless otherwise is specified, the uncertainty of measurement has not been taken into account when assessing pass/fail of the sample against the requirements of the standard. In case consideration of measurement uncertainties when assessing pass/ fail limits, some results may be in borderline. Information on uncertainty is contained in appendix A on this report.
3	:	The test and/or measurement results, the uncertainties (if applicable) with confidence probability and test methods are given on the following pages which are part of this report.

CLASS 1 / PASS

DNI	Did Not Ignite.
IBE	Ignited, But Extinguished.
SF uc	Surface Flash, Under The Stop Thread, But DOES NOT break the stop thread.
SF pw	Surface Flash, Part Way. No time shown because the surface flash did not reach the stop thread.
SF poi	Surface Flash, at the point of impingement only. (Equivalent to "Did Not Ignite" for plain surfaces.)
0.0 sec.	Actual burn time measured and recorded by the timing device.
0.0 SF only	Time in seconds, surface flash only. No damage to the base fabric.
0.0 SFBB	Time in seconds, Surface Flash Base Burn starting at places other than the point of impingement as a result of surface flash.
0.0 SFBB poi	Time in seconds, Surface Flash Base Burn starting at the point of impingement. This result does not qualify as a base burn under the current interpretation of part of 16 CFR part 1610.
0.0 SFBB poi*	Time in seconds, Surface Flash Base Burn possibly starting at the point of impingement. The asterisk (*) is accompanied by the following statement: "Unable to make absolute determination as to source of base burns." This statement is added to the result of any specimen if there is a question as to origin of the base burn.

COMMENTS: Pass Class 1, Normal Flammability of Commercial Standard 16 CFR 1610, Formerly 191-53 of United States Flammability Fabric Act.

A classification cannot be made due to the use of a modified procedure which was used to rack and support the specimens for testing. Therefore, results are reported for informational purposes only.

REMARKS		
1	:	P: Pass, F: Fail, DATA: No Evaluation, N/A: Not Applicable
2	:	*The reported expanded uncertainty is based on the standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95%. Unless otherwise is specified, the uncertainty of measurement has not been taken into account when assessing pass/fail of the sample against the requirements of the standard. In case consideration of measurement uncertainties when assessing pass/ fail limits, some results may be in borderline. Information on uncertainty is contained in appendix A on this report.
3	:	The test and/or measurement results, the uncertainties (if applicable) with confidence probability and test methods are given on the following pages which are part of this report.
